INSIGHTS SUMMARY

HOW CAN WE PUT PEOPLE AT THE HEART OF CLIMATE ACTION TO BUILD RESILIENCE AND SHARED PROSPERITY?

COP31 ONLINE COMMUNITY FORUM / 12 NOVEMBER 2026

PEOPLE WHO HAVE CONTRIBUTED LEAST TO CLIMATE CHANGE ARE OFTEN AMONG THOSE MOST EXPOSED TO ITS EFFECTS. YET CLIMATE ACTION STILL TOO OFTEN TREATS COMMUNITIES AS BENEFICIARIES RATHER THAN DECISION-MAKERS, OR PROTECTS BUSINESS ASSETS WITHOUT ADDRESSING THE WIDER SYSTEMS ON WHICH COMPANIES DEPEND.

INTRODUCTION

This community forum explored a practical alternative: making people-centred climate action part of how businesses plan, purchase, invest and measure performance. Through an opening panel and community discussions, participants explored how locally led resilience, fairer supply chains, accessible green jobs and stronger partnerships can protect livelihoods while supporting business continuity. The central test is whether climate action leaves people more secure, better able to earn a decent living and more able to shape their futures.

OPENING PANEL INSIGHTS

Three leaders from business and international development shared practical examples and perspectives on building resilience, creating inclusive economic opportunities and driving change at scale:

Char Love, *Global Ambassador,* **Natura**, emphasised that climate resilience begins with understanding how risks affect people, not just physical assets. Natura's Climate Vulnerability Index combines meteorological and social data to identify risks across its operations, supply chains and communities. Importantly, this information is shared with communities to co-create adaptation solutions that build on existing local knowledge, including disaster-response training and insurance opportunities. Char also highlighted Natura's Living Amazon Mechanism, combining finance, purchasing commitments and technical

assistance for farmers. Its community-based agro-industries enable local cooperatives to process ingredients, capture more value and create opportunities for young people. She stressed the importance of combining finance, skills, technology and local ownership to strengthen livelihoods and shared prosperity.

Amy Luinstra, *Solutions & Impact, Gender,* **World Bank Group**, highlighted that investing in the resilience of workers, supply chains and communities is also good for business. She shared examples of adaptation financing, including social protection programmes in the Sahel and agricultural insurance supporting millions of smallholder farmers across Africa. Turning to economic opportunities, Amy stressed that creating jobs is not enough. We must consider where and when opportunities emerge, who can access them and whether they offer decent livelihoods. She highlighted industry-led skills development and innovative financing mechanisms that incentivise businesses to increase women's participation in technical roles and leadership, ensuring that economic transformation delivers more inclusive benefits.

George Gray Molina, *Chief Economist, Global Policy Bureau,* **UNDP**, made a compelling economic case for investing in resilience before climate shocks become crises. Drawing on UNDP's *The Cost of Waiting* research, he highlighted the significant financial benefits of anticipating predictable disruptions rather than responding after they occur. He also pointed to technological advances in renewable energy, batteries and AI as opportunities to accelerate sustainable and inclusive economic development, particularly through small and medium-sized enterprises. However, he emphasised that individual business initiatives are insufficient without wider systems change. Addressing governance, institutional stability, debt constraints and access to finance is essential to create the conditions for businesses and communities to thrive. His message was to seize the opportunity presented by technological transformation to build more resilient, inclusive economies.

WE THANK THESE LEADERS FOR INSPIRING AND SHAPING THE FORUM CONVERSATIONS:

Amy Luinstra**, Solutions & Impact, Gender, **World Bank

Char Love,** Global Ambassador, **Natura

George Gray Molina**, Chief Economist, Global Policy Bureau, **UNDP

COMMUNITY FORUM INSIGHTS

Building on the panel, community members shared their experiences and ideas through peer-circle discussions and a written forum, identifying priorities and practical actions for people-centred climate action.

INSIGHT 1: **MAKE COMMUNITY RESILIENCE PART OF BUSINESS RESILIENCE**

Business continuity cannot stop at the factory gate. Flooding may leave a company's assets intact while destroying roads, interrupting schooling, contaminating water or preventing workers from travelling. Climate risk assessments should therefore account for the homes, health, transport, water and other essential systems on which workers, suppliers and surrounding communities rely.

Participants also stressed the value of acting before hazards become disasters. Communities can identify who is already exposed, which risks are emerging and which responses will work locally. Businesses should use this knowledge to shape continuity plans, early-warning systems and investment. Doing so can strengthen community security while reducing operational and supply-chain risks.

INSIGHT 2: **USE PURCHASING POWER TO HELP SUPPLIERS ADAPT**

Producers cannot invest in adaptation if prevailing prices fail to cover the costs of sustainable production. Participants identified fair pricing, predictable orders, decent wages and longer-term commercial relationships as practical foundations for resilience. These measures give suppliers more scope to improve soil health, diversify production, manage disease and prepare for climate shocks without sacrificing immediate household needs.

Procurement teams should examine who bears the cost and risk of transition throughout each supply chain. Contracts, finance and technical support need to work together, with producers involved in defining what they require. Purchasing power can then support shared resilience rather than transfer climate costs to vulnerable suppliers and workers.

INSIGHT 3: **TURN CLIMATE INVESTMENT INTO ACCESSIBLE, DECENT WORK**

Low-carbon investment will not automatically create inclusive prosperity. New jobs may emerge in different places, or at different times, from those being lost. People without formal education, relevant training or access to finance may remain excluded. Businesses and their partners should ask not only how many jobs an investment creates, but who can secure them, whether they offer decent conditions and what support people need to participate.

LACI's workforce programmes illustrate this approach by combining technical

training, recognised qualifications, career coaching, paid internships and placement support. Following the Los Angeles wildfires, its resilient-rebuilding course was designed around employer demand and the needs of affected residents. Such models connect climate recovery with local capability and credible routes into work.

INSIGHT 4: **BUILD THROUGH LOCAL INSTITUTIONS RATHER THAN AROUND THEM**

Lasting climate action requires communities to hold real influence over priorities, resources and measures of success. Participants warned that consultation can become a box-ticking exercise conducted after decisions have already been made. Effective partnerships involve communities early, recognise local knowledge and work through existing organisations, enterprises and public institutions rather than creating parallel structures.

This means treating smallholder farmers, workers and local innovators as partners, not simply as recipients. Businesses can contribute flexible finance, market access, technical expertise and convening power, but should resist imposing standardised models. Even proven approaches need to reflect local realities. The aim is to build local capability and ownership that endure beyond a single project or funding cycle.

INSIGHT 5: **MEASURE CLIMATE SUCCESS BY WHO BENEFITS**

Emissions reductions, hectares restored and numbers of green jobs remain important, but they do not show whether climate action has improved people's lives. Participants called for measures covering income, job quality, economic security, health, education and people's ability to recover and reinvest after a shock. These indicators should be developed with affected communities and adapted to local social and cultural contexts.

Participatory measurement can also reveal who is being missed. Family- and community-level data can uncover priorities hidden by aggregate reporting, while measurement built into partnerships from the outset supports learning and accountability. The question is not only what an intervention delivered, but whether people used it, valued it and gained greater agency as a result.

CONCLUSION

The discussion pointed towards a shift from stand-alone climate programmes to people-centred delivery across core business decisions. Resilience planning must extend beyond company assets, procurement must enable suppliers to adapt, and climate investment must create credible routes into decent work for people at risk of exclusion. Communities also need meaningful influence over both action and measurement.

The persistent barriers are fragmented finance, short project cycles and institutions that retain decision-making power. Progress now depends on connecting and scaling proven approaches through place-based, cross-sector

partnerships. People-centred climate action should become a way of doing business, judged by whether communities gain security, opportunity and agency.

WE THANK THESE COMMUNITY MEMBERS FOR ENRICHING THE DISCUSSION WITH THEIR INSIGHTS AND PERSPECTIVES:

Abireham Misganaw**, Climate Lead, **Pathfinder International US

Adela Hankus**, Strategic Comms & Members Manager, **Climate Strategies

Ambreen Waheed**, Founding Partner, **RBI-CERT*

Angelina Tut**, Founder and Executive Director, **Women prosper Organisation

Anna Renfrew**, Policy & Advocacy Advisor, **Mercy Corps

Austin Atsua**, Member, Global Expert Network, **Business Fights Poverty*

Bryan Cortright**, Corporate Partnerships Manager, **Water Unite

Catherine Townson**, Corporate Partner Lead, Financial and Professional Services, **Save the Children UK

Claire Hancock,** Senior Technical Lead, Living Wage Living Income, **The Fairtrade Foundation

Ekanath Khatiwada**, Agrifood & Energy Sector Leader, **SNV*

Estelle Reyes**, SVP, Enhancing Community, **LACI

Francesca Brown**, Global Director of Policy, **Women's World Banking

Hamish Taylor**, Director, **Shinergise Partners Ltd*

Hannah Davis**, Development Manager, Farmers' Voice Radio, **The Lorna Young Foundation

Hayden Aaronson**, Global Expert Network, **Business Fights Poverty*

Jennifer Owens**, Member, Head of Marketing, **Tracera*

John Bee**, Member, **Global Expert Network, Business Fights Poverty*

Julia Corvalán,** Poverty Stoplight Global Operations Manager, **Fundación Paraguaya

Keeva Duffey**, Advisor Sr., Sustainability, **ChildFund International

Maggie Rarieya**, Member, **Global Expert Network, Business Fights Poverty

Martha Brantley**, EVP, Revenue and Partnerships, **Heifer International

Mihir Sripuram**, Associate, **auctusESG

Paresh Patel**, Founder & CEO, **e^2=equitable energy*

Paul Ellingstad**, Member, **Global Expert Network, Business Fights Poverty*

Rachel Seftel**, Head of Research & Impact, **Cherie Blair Foundation

Rosario Diaz Garavito**, Founder & CEO, **The Millennials Movement

Ruth Thomas**, Head, Nature-Positive Agriculture, **WWF

Selen Ucak**, Senior Advisor, **Refugee Investment Network*

Stef Engels**, Member, **Global Expert Network, Business Fights Poverty

Dr Stephanie Shankland**, Member, **Global Expert Network, Business Fights Povert *

Susan Myers**, Founder, **Impact Navigators*

Trina Mallik**, Senior Advisor, **Eco Equity*

Uwe Steckhan**, Chief, Multi-Stakeholder Partnerships, Private Fundraising and Partnerships Division (PFP), **UNICEF

Yaquta Fatehi**, Technical Lead, Monitoring, Evaluation & Learning, **William Davidson Institute, University of Michigan
